

FOR IMMEDIATE RELEASE

**Differential Bushing Lockout Kit for Sixth Gen Camaro
BK060 - \$179.95**

Reduce wheelhop and pinion rise, and enhance the rear stability of your 2016 and newer Camaro by reducing differential movement with a Differential Bushing Lockout Kit from BMR Suspension. Stock rubber bushings with voids are great for minimizing NVH, but cause wheelhop and damage to rear suspension parts. Designed from 6061-T6 billet aluminum, these differential bushing lockout inserts greatly reduce deflection, differential movement, and pinion rise that you experience with the factory bushings. BMR Differential Bushing Lockout Kit (BK060) transfers more power to the differential by reducing wasted movement and energy. BMR designed the BK060 for street performance, drag race, and handling applications, making them the perfect wheelhop solution for performance-based 6th Gen Camaros. Each insert is CNC-machined to strict tolerances, which ensures high quality and a perfect fit. These bushing inserts eliminate nearly all differential movement, increasing handling stability and giving you a much-improved overall feel in any performance driving situation. Installation time is about 1 hour. Proudly made in the U.S.A.!
