

FOR IMMEDIATE RELEASE

**Polyurethane Cradle Bushings for 6th Gen Camaro
BK061 - \$189.95**

Minimize wheelhop, improve handling, and enhance the rear stability of your 2016-newer Camaro with Polyurethane Cradle Bushings from BMR Suspension. Stock rubber bushings with voids are great for minimizing NVH, but deflect tremendously. This causes wheelhop, which reduces traction and can damage rear suspension parts. Designed from 95-durometer polyurethane, BMR's cradle bushings center the cradle and greatly reduce deflection caused by the stock rubber bushings. BMR Poly Cradle Bushings (BK061) solidly connect the cradle to the chassis, reducing deflection and transferring more power to the tires. BMR designed the BK061 for street performance, drag race, and handling applications, making them the perfect wheelhop solution for any performance-based 6th Gen Camaro. Each bushing is made to strict tolerances, which ensures high quality and an exact fit. These bushings reduce cradle movement and wheelhop, while increasing handling stability. This gives you a much-improved overall feel with moderate increases in NVH. Installation time is about 3-4 hours. Proudly made in the U.S.A.!
