

FOR IMMEDIATE RELEASE

IRS Spherical Bearing Kits for 2016-Newer Chevrolet Camaro
BK065 - \$159.95//BK066 - \$159.95//BK069 - \$159.95
BK067 - \$189.95

Minimize wheelhop, rear alignment changes, and enhance the stability of your 2016 and newer Camaro with an IRS Spherical Bearing Kit from BMR Suspension. The stock rubber bushings are great for absorbing NVH, but do little for performance. The large spherical bearings in BMR's IRS Spherical Bearing Kits eliminate bushing deflection, which is the root of wheelhop, rear wheel alignment changes, and rear spindle rotation. The BMR Suspension IRS Spherical Bearing Kits use heavy-duty 3/4-inch spherical bearings (BK065-Rear Upper Trailing Arms, BK066-Rear Lower Trailing Arms, BK067-Rear Lower Control Arms, and BK069-Rear Upper Control Arms), all using CNC-machined bearing cups that replace the factory rubber bushings. The assemblies are completed with CNC-machined billet aluminum spacers. This allows for a perfect fit and increased performance for any driving style. BMR designed these kits for street performance, drag race, and handling applications. The spherical bearing eliminates almost all fore and aft trailing or control arm bushing movement. This reduces wheelhop and increases handling stability, while greatly improving the overall feel in any performance-driving situation. The BMR IRS Spherical Bearing Kits come in a durable black anodized finish. Installation time is 2-3 hours.
