

FOR IMMEDIATE RELEASE

**Rear Cradle Braces for 2016-Newer Chevrolet Camaro
CB008 - \$99.95**

Reduce Wheelhop and cradle movement and deflection on your 2016-newer Chevrolet Camaro with rear Cradle Braces from BMR Suspension. Built from heavy-duty, 1 1/2-inch DOM steel tubing, BMR's CB008 Cradle Braces are designed to greatly reduce cradle deflection, which is one of the biggest causes of wheelhop. BMR's CB008 attaches to the front section of the rear cradle and frame to strengthen the entire assembly. The braces capture the bottom side of the front cradle mounts, making each front mount double shear. This mounting style adds strength and reduces deflection. The braces also mount to the frame, eliminating any cradle deflection caused by the factory single shear mounts. BMR Suspension designed the CB008 Cradle Braces for street performance, drag race, and handling application. These 100% bolt-on braces use existing boltholes and supplied hardware, allowing for easy installation with simple hand tools. BMR Suspension's CB008 rear Cradle Braces are an easy and affordable way to effectively lessen wheelhop and cradle movement on your Sixth Gen Camaro.
