

FOR IMMEDIATE RELEASE

**Rear Cradle Brace for 2016-Newer Chevrolet Camaro
CB009 - \$169.95**

Reduce cradle movement, deflection, and wheelhop on your 2016-newer Chevrolet Camaro with a rear Cradle Brace from BMR Suspension. Built from heavy-duty, lightweight, 1 1/4-inch Chrome-moly tubing, BMR's CB009 Cradle Brace is designed to greatly reduce cradle deflection. This is one of the biggest causes of wheelhop. BMR's CB009 attaches to the rear section of the cradle and frame to strengthen the entire assembly. The lightweight brace captures the bottom side of the rear cradle mounts, making each rear mount double shear. The brace also attaches to the frame, eliminating any cradle deflection caused by the factory single sheer mounts. BMR Suspension designed the CB009 Cradle Brace for street performance, drag race, and handling application. This 100% bolt-on brace uses existing boltholes and supplied hardware, allowing for easy installation with simple hand tools. BMR Suspension's CB009 rear Cradle Brace is an easy and affordable way to effectively lessen wheelhop and cradle movement on your Sixth Gen Camaro.
