

FOR IMMEDIATE RELEASE

**BMR Suspension Adjustable Front and Rear Sway Bar Kit for 2016-Newer Camaro
\$469.95**

Improve handling, reduce body roll, and increase cornering stability with an adjustable sway bar kit for the 2016-newer Chevrolet Camaro from BMR Suspension. Designed from 1.25-inch (front) and 1.25-inch (rear) DOM steel tubing, the BMR sway bars are cold formed to better resist torsional fatigue and retain "memory" far longer than conventional hot-formed bars. The BMR Adjustable Sway Bar Kit (PN SB052) gives you 150%-212% (front) and 178%-234% (rear) increase in sway bar rate over the stock bars, reducing body roll and improving handling. BMR Suspension designed these adjustable sway bars for street performance, autocross, and road race applications. The SB052 feature three positions on the front sway bar and three positions on the rear sway bar. They attach to the car with 88-durometer polyurethane bushings, greatly reducing the deflection seen in rubber bushings. Thrust washers locate the sway bars, eliminating lateral movement under aggressive cornering. Front sway bar (SB053) and rear sway bar (SB054) are also sold separately. Installation time is 2-3 hours. Available in black hammertone or red powdercoat. Proudly made in the U.S.A.!
