

FOR IMMEDIATE RELEASE

**BMR Suspension Double Adjustable Front Rear Lower Control Arms for
2016-2024 Chevy Camaros**

FLC368 - \$299.95

Minimize control arm flex and improve durability on your 6th Gen Chevy Camaro with a set of Front Lower Control Arms from BMR Suspension! Factory aluminum control arms utilize soft rubber bushings that are great for comfort, but cause major deflection under hard braking and cornering. BMR's Front Rear Lower Control Arms (FLC368) replace the factory rear lower control arms on the front of your Camaro to minimize flex and improve durability. The FLC368 is manufactured from heavy-duty 1-inch DOM steel tubing and utilizes Teflon-lined rod ends to improve repeatability and eliminate bushing deflection. BMR's FLC368 also benefits from its rod end design by being double adjustable, allowing for adjustments to be made based on performance needs. For those looking for a fully bolt-on upgrade that improves cornering repeatability and minimizes control arm flex, BMR's FLC368 is the upgrade you need.

BMR Suspension has designed the FLC368 for street performance, drag racing, and road racing applications. The FLC368 is available in red or black hammertone powder coat for long lasting great looks, and installation takes about 1-2 hours. As with all BMR Suspension products, the FLC368 is proudly designed and manufactured in the USA!
